TRANSCRIPT OF PROCEEDINGS  
BEFORE THE HONORABLE LAWRENCE E. KAHN  
December 7, 2016  
445 Broadway, Albany, New York

A P P E A R A N C E S

ATTORNEYS FOR PLAINTIFFS:

WEITZ, LUXENBERG LAW FIRM  
700 Broadway  
New York, New York 10003  
By: Robin Greenwald, Esq.

FARACI, LANG LAW FIRM  
28 East Main Street  
Rochester, New York 14614  
By: Stephen Schwarz, Esq.

ATTORNEYS FOR DEFENDANT SAINT-GOBAIN

QUINN, EMANUEL LAW FIRM  
51 Madison Avenue  
New York, New York 10010  
By: Sheila Birnbaum, Esq.  
Patrick Curran, Esq.

ATTORNEYS FOR DEFENDANT HONEYWELL

ARNOLD, PORTER LAW FIRM  
601 Massachusetts Avenue N.W.  
Washington, D.C. 20001  
By: Elissa J. Preheim, Esq.

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 COURT CLERK: Wednesday, December 7th, 2016,  
2 the case is Michele Baker, Angela Corbett, Daniel  
3 Schuttig, Michael Hickey, Charles Carr, Pamela Forrest,  
4 Kathleen Main-Lingener, Kristin Miller, James Morier,  
5 Jennifer Plouffe and Silvia Potter versus Saint-Gobain  
6 Performance Plastics Corporation and Honeywell  
7 International, Incorporated, case number 1:16-cv-917.

8 We are here for a motion hearing. May we have  
9 appearances for the record, please.

10 MS. GREENWALD: Good morning, your Honor.  
11 Robin Greenwald for the plaintiffs.

12 MR. SCHWARZ: Stephen Schwarz for the  
13 plaintiffs.

14 THE COURT: Mr. Schwarz.

15 MS. BIRNBAUM: Your Honor, Sheila Birnbaum for  
16 the defendant Saint-Gobain.

17 THE COURT: Ms. Birnbaum.

18 MS. PREHEIM: Good morning, your Honor. Elissa  
19 Preheim for defendant Honeywell.

20 THE COURT: Ms. Preheim.

21 MR. CURRAN: Good morning, your Honor. Patrick  
22 Curran, Saint-Gobain.

23 THE COURT: Very good. So, apparently, as I  
24 understand it, there's going to be two attorneys arguing  
25 on each side. Am I correct about that?

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 MS. BIRNBAUM: Yes, your Honor.

2 THE COURT: And we should be done a little  
3 before noon, in that area. So, I say each of you should  
4 go about ten minutes and then reply, you will have a  
5 little time to reply to each other if that sounds  
6 workable.

7 MS. BIRNBAUM: Yes, your Honor.

8 MS. GREENWALD: Yes, your Honor.

9 THE COURT: No bell or lights here. Use our  
10 heads and I guess we will begin. Obviously we have Ms.  
11 Birnbaum.

12 MS. BIRNBAUM: Yes. Thank you, your Honor.

13 THE COURT: Proceed.

14 MS. BIRNBAUM: Your Honor, I'm going to address  
15 the medical monitoring causes of action and Ms. Preheim  
16 will discuss the property causes of action, just to give  
17 you a road map of where we are headed.

18 As Your Honor knows, there also was a motion to  
19 dismiss the injunctive relief here, remedial relief, and  
20 parties have stipulated and Your Honor has ordered that  
21 that be stayed until April because many of the issues  
22 raised by those motions may go away because a lot of the  
23 remedial work is being done.

24 There is a permanent filter being put into the  
25 municipal systems, paid for by the defendants, and POETS

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 have been put on the private wells. So that's off the  
2 table.

3 THE COURT: I'm aware of that, yes.

4 MS. BIRNBAUM: Thank you. And so we go on to  
5 the medical monitoring claim. Your Honor, the  
6 plaintiffs' claim should be dismissed for medical  
7 monitoring because it fails to state a cause of action  
8 under New York law.

9 We are not writing on a clean slate here  
10 because the New York Court of Appeals has clearly stated  
11 what gives rise to damages from medical monitoring or  
12 cause of action for medical monitoring, and the Caronia  
13 case, which was decided recently by the New York Court of  
14 Appeals, governs here under Geary. I think Your Honor  
15 needs to follow Caronia. It is the existing law in  
16 New York.

17 And what does Caronia tell us? Caronia tells  
18 us, first of all, that New York does not recognize a  
19 cause of action for medical monitoring, an equitable  
20 medical monitoring, and in reaching that decision, the  
21 New York Court of Appeals clearly weighed and balanced  
22 the public policy issues of whether there should be a  
23 cause of action or recovery for asymptomatic plaintiffs  
24 in New York. That is, plaintiffs that do not have a  
25 present physical injury.

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1           The plaintiffs in this case, in fact, the  
2 plaintiffs have excluded from their class anyone who  
3 files a personal injury case. So, they understand that  
4 they are seeking medical monitoring damages and I'd like  
5 to get back to that because they're really not seeking  
6 damages. They're really seeking injunctive relief here.

7           What they have asked in their complaint is not  
8 for damages for medical monitoring, that goes to  
9 individual plaintiffs. What they're talking about is  
10 setting up a program of medical monitoring, an injunctive  
11 relief, and that would then lead to a fund to be created  
12 that would be paid for by the defendants. That is  
13 exactly what the plaintiff was requesting in Caronia. In  
14 Caronia the plaintiff -- does Your Honor have a question?

15           THE COURT: Well, I'm thinking you do cite  
16 Caronia, the case of Askey, but in that case didn't they  
17 cite a case called Abusio, which seems to support that  
18 the fear of contracting a disease is a physical injury,  
19 which was implied in Abusio and that was cited by Caronia  
20 favorably?

21           MS. BIRNBAUM: This is not a fear case. This  
22 is not a fear case. This is really, when you get down to  
23 it, a case of plaintiffs -- they have a fear for PFOA in  
24 their blood and accumulation for PFOA is what the injury  
25 is. They call that a physical injury. Well, that was

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 before the Court in Caronia. Caronia could not find that  
2 it was a physical injury. In fact, in Caronia, the  
3 plaintiffs there were arguing exactly like the plaintiffs  
4 here, that they had cellular damage, that the cigarette  
5 smoke caused cellular damage and that was physical  
6 injury.

7 The Court did not agree with them. The Court  
8 treated it as an exposure case that did not have a  
9 physical injury and the Court found that there was no  
10 cause of action for medical monitoring but the Court also  
11 found, and stated very strongly, that not only was there  
12 no cause of action, but you had to sustain a physical  
13 injury, a physical injury before you could recover tort.

14 So it's -- it was basic tort law that the Court  
15 was looking at. If you had a negligence cause of action,  
16 you have to plead and prove duty, breach of duty and  
17 actual injury. Actual injury. A physical injury. If  
18 you had kidney cancer, then you have a physical injury.  
19 But the fact that you have -- that was why it was being  
20 argued in Caronia, too. The fact that you had an  
21 accumulation of a chemical in your bloodstream, that does  
22 not give rise to a physical injury under New York law and  
23 that New York Court of Appeals told everybody why that  
24 was. They went through the rationale. And, by the way,  
25 plaintiffs never talk about the rationale of the decision

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 and what was the rationale of the decision? The New York  
2 Court of Appeals cites to the U.S. Supreme Court case in  
3 Buckley against Metro-North, which also denied common law  
4 right to medical monitoring and the -- the --

5 THE COURT: I was going to say, also a case,  
6 which I don't know if you cited it, the World Trade  
7 Center Lower Manhattan Disaster Site case, that was a  
8 Second Circuit, which also seemed to imply what was said  
9 in Abusio was saying this kind of case there was, there  
10 is a physical injury. Did you see that case?

11 MS. BIRNBAUM: Your Honor, I'm familiar with  
12 that case. I was a special master in those cases but  
13 that also was quite different than what we have here.  
14 There they were alleging physical injury.

15 THE COURT: Right.

16 MS. BIRNBAUM: The fact was that they were  
17 injured. Here they're not alleging physical injury, they  
18 are alleging only accumulation of PFOA in their blood,  
19 risk of injury, which clearly, under New York, does not  
20 give rise to physical injury, and that there was  
21 subcellular or cellular or genetic changes. That's  
22 exactly what was before the Court in Caronia.

23 The Court said that's really not a present  
24 injury and there are a number of Courts that have said so  
25 since that time. There are two PFOA cases we cited, your

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 Honor. One from the Fourth Circuit and one from the  
2 District Court in Alabama in which the exact same  
3 arguments were made but the law in those states were not  
4 any different than the law of New York, that had to  
5 establish a present physical injury in order to recover  
6 medical monitoring damages. The Court said accumulation  
7 or changes in cells are not a present physical injury.

8 And, your Honor, reason for that is cells can  
9 change. That's not an injury. The Supreme Court noted  
10 that in Metro-North as well and the reason for that is if  
11 that is an injury, then millions, tens of millions of  
12 people would have a cause of action. All the people that  
13 have been exposed to asbestos has accumulation of  
14 asbestos in their body and cellular changes. That  
15 doesn't mean they have a present injury, and almost every  
16 Court that has looked at this says that is not a present  
17 injury that would give rise to medical monitoring damages  
18 and that is why the plaintiffs here do not have a cause  
19 of action. They can call it a physical injury but it  
20 just isn't, and that was before the Court in Caronia. It  
21 is not dicta in Caronia when the Court says you have to  
22 have a physical harm before you can recover in tort.

23 And if that was the case, and the Court says  
24 this in no uncertain terms, we would have limited  
25 liability. There would be no way to serve this

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 liability. The courts would be overwhelmed with cases in  
2 which people say I have been exposed to a harmful  
3 chemical and, therefore, I have cellular changes and I'm  
4 entitled to medical monitoring cases.

5 The public policy reasons -- and by the way,  
6 in -- in -- in Caronia, the Court carefully weighed the  
7 fact, isn't there some positives by having a medical  
8 monitoring? Wouldn't it be a good idea from -- from a  
9 policy point of view to have medical monitoring to see if  
10 you can determine if there is injury. And the Court  
11 weighed that against the Court's determination, following  
12 the U.S. Supreme Court, saying it would -- it would lead  
13 to liability that was limitless. There would be no way  
14 for the courts to limit the liability.

15 There would be no way to take out the  
16 speculative nature of these claims and, therefore, the  
17 Court, weighing the pros and cons, tell that you have to  
18 have a present injury and they do not have a present  
19 injury, no matter how they try and, your Honor, I -- in  
20 Caronia, if you look at that case, and we looked at the  
21 briefs very carefully, there were clearly argument in  
22 Caronia. There was clearly arguments made that there was  
23 a present injury and that was the accumulation of smoke  
24 and cellular changes and that was rejected by the  
25 New York Court of Appeals as it has been rejected by the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 Seventh District of Alabama in PFOA cases and it has been  
2 rejected by the Fourth Circuit in another PFOA case.

3 If we allow this case in this instance, not  
4 only will the federal court be making new law that is  
5 contrary to New York law, but it would be opening the  
6 floodgates that thousands and thousands and thousands,  
7 millions of plaintiffs who have been exposed, who have no  
8 present injury.

9 New York law is clear. If you look at the  
10 Ivory case, what the Court did in Ivory is said, if you  
11 had kidney cancer, you then can have a medical monitoring  
12 damages arising from your kidney cancer. But if you only  
13 have exposure and accumulation, you have no cause of  
14 action for medical monitoring.

15 THE COURT: In Ivory -- you mentioned Ivory.  
16 Did that involve a claim for contamination of drinking  
17 water? I don't think it did.

18 MS. BIRNBAUM: It was. It was a -- my  
19 recollection, it was contamination case.

20 THE COURT: Source -- of a source --

21 MS. BIRNBAUM: Of the Fourth Department. The  
22 Fourth Department reviewed the Supreme Court and came to  
23 the conclusion that the dismissal of the medical  
24 monitoring cases for asymptomatic plaintiffs, that we  
25 have here, was proper. The case should be dismissed.

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 The only case that was allowed to go forward for personal  
2 injury was the person who had kidney cancer, his case  
3 could go forward because he had a present injury.

4 THE COURT: So you're suggesting, you're saying  
5 or alleging or contending that a water source of a home  
6 that's contaminated and causes a homeowner to lose his  
7 investment in the house, there's no legal -- no legal  
8 remedy for him basically?

9 MS. BIRNBAUM: I think what Your Honor is  
10 suggesting, if you could show that you had a property  
11 damage, does that give you the right to medical  
12 monitoring and I think here the answer would be --

13 THE COURT: There's no property.

14 MS. BIRNBAUM: There's -- they're not alleging  
15 property damage. They're alleging other things that my  
16 co-counsel will discuss but I think also, if you look at  
17 the cases very carefully, I think Ivory would be wrong on  
18 that case and you could have to have -- Caronia Court was  
19 so clear that you have to have a present physical injury  
20 and it cannot be that you have a physical injury if you  
21 have no symptoms, if you have no manifest injury.

22 This is just a exposure case. It is increased  
23 risk case and the New York Courts have clearly said those  
24 cases are not able to recover medical monitoring.

25 THE COURT: Okay.

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 MS. BIRNBAUM: Thank you.

2 THE COURT: I appreciate the argument and --

3 MS. BIRNBAUM: Thank you, your Honor. I hope I  
4 stayed within my time.

5 THE COURT: Well, you did. You did okay.

6 MS. BIRNBAUM: Thank you.

7 THE COURT: I think maybe we should hear the  
8 other side as to -- since we are doing issue by issue,  
9 maybe right now I'd like to hear the plaintiffs' response  
10 to that one issue and then I'll hear the other side and  
11 then back here.

12 MR. SCHWARZ: Thank you, your Honor. Stephen  
13 Schwarz for the plaintiffs.

14 THE COURT: Right.

15 MR. SCHWARZ: Your Honor, I think on any motion  
16 to dismiss case, Rule 12, the place to start is the  
17 pleadings and one of the things that we disagree with  
18 vehemently is the defendants' interpretation of our  
19 pleadings.

20 The defendants have argued in their brief that  
21 our claim for injury is increased risk of future disease.  
22 That is a consequence of the injury we're claiming but  
23 not the injury we're claiming.

24 Ms. Birnbaum started out by taking about a  
25 cause of action for medical monitoring. We didn't allege

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 a cause of action for medical monitoring. We allege  
2 consequential damages of medical monitoring attaching to  
3 the other common law tort claims of negligence and  
4 trespass. So right from the outset, and if you look at  
5 our brief, it is unambiguous in that we say that -- at  
6 paragraph 165, plaintiffs in the biomonitoring class  
7 suffer injury and damage at the cellular and genetic  
8 level by accumulation of PFOA in their body.

9 Page 166 -- excuse me -- paragraph 166 we state  
10 plaintiffs in the class have suffered and continue to  
11 suffer damages, including personal injury, due to the  
12 accumulation of PFOA in their bodies.

13 So, again, the Court of Appeals recognized in  
14 the Snyder case that disease was a consequence of injury,  
15 not the injury itself. The injury was complete upon  
16 toxic invasion. What we're alleging is that the toxic  
17 invasion, the injury, these people are indeed at  
18 increased risk of future illness. That's what the remedy  
19 of medical monitoring is intended to do, to provide them  
20 with screening and early diagnosis and treatment. But  
21 the injury is the toxic invasion.

22 So, under Rule 12 basically we have alleged an  
23 injury. Now, the Court clearly understands under Rule 12  
24 that our allegations are deemed true at this stage  
25 unless -- unless the defendants can point to case law

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 that says that our allegations of injury are insufficient  
2 as a matter of law.

3 Your Honor, as it turns out, not only is that  
4 not true but there are nine Court of Appeals cases  
5 spanning 80 years saying that the allegations we made are  
6 an injury as a matter of law. Those cases started with  
7 the Schmidt case and most recent -- not most recently but  
8 in 1995, for instance, the Consorti case and it's  
9 interesting. Again, Ms. Birnbaum, in their briefs, spent  
10 very little time talking about nine Court of Appeal cases  
11 that say exactly this, Judge. They say, in a right mind  
12 readily verifiable rule was adopted in which, as a matter  
13 of law, the tortious injury is deemed to have occurred  
14 upon the introduction of the toxic substance into the  
15 body. That was in Consorti in 1995.

16 It was followed in that same year by Rothstein,  
17 which says an unbroken string of this Court's decisions  
18 from Schmidt in 1936 to Consorti this year has upheld  
19 this benchmarks that injury occurs upon the invasion of  
20 the body.

21 So, the law in New York State has been, for 80  
22 years, that an injury sufficient to support a cause of  
23 action for negligence occurs when the toxic invasion is  
24 in the body. So --

25 THE COURT: Everyone is citing, you're citing

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 to the Caronia case and does that case seem to expressly  
2 rule out claims for increased risk of developing cancer  
3 or other diseases?

4 MR. SCHWARZ: Your Honor, that -- let me get to  
5 that. If I could answer your question saying that -- the  
6 only way that that line of 80 years of precedence in New  
7 York State could be overruled is if it's overruled by the  
8 Court of Appeals and here in the Caronia case or if it  
9 was overruled by statute.

10 So let's look at the Caronia case. What did  
11 the Caronia case hold? The Caronia case, of course, was  
12 a case where the Second Circuit certified a question to  
13 the New York Court of Appeals and that question  
14 specifically was, Does New York recognize an independent  
15 equitable cause of action for medical monitoring or will  
16 it create one basically because none had ever been  
17 recognized before.

18 What the Caronia Court held in answer to that  
19 question was no. They refused to -- to adopt an  
20 independent equitable cause of action for medical  
21 monitoring for plaintiffs who had no alleged present  
22 injury. That's the first hold. The second part was, in  
23 New York medical monitoring damages are available to  
24 plaintiffs who can otherwise state a cause of action for  
25 negligence as a result of alleged damage to person or

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 property.

2           So what the Court of Appeals said is, we have  
3 common law torts in New York. They require either injury  
4 of property or injury to person. If you can meet those  
5 standards, then you can -- then you can recover  
6 consequential medical monitoring damages, assuming that  
7 you prove the elements that are required for doing that.  
8 But without any present injury or without any injury to  
9 property, there is no claim for equitable claim, the  
10 Court would not go that far and, of course, there was a  
11 vehement dissent on that.

12           But what I'm saying, your Honor, is, those are  
13 the two points that are made in Caronia and neither of  
14 them overturns or refute the 80 years of precedence in  
15 New York State that injury happens at toxic invasion and  
16 the important part of Caronia, which was not mentioned on  
17 the argument by my learned counsel, was that the  
18 plaintiffs in Caronia did not claim a present personal  
19 injury. In fact, they chose not to claim that because  
20 the statute of limitation argument would be -- they would  
21 lose the cases on statute of limitations. All these  
22 people were smokers for years and years and years and  
23 their only hope of having any recovery was for the Court  
24 to recognize a new cause of action for medical  
25 monitoring, and to set the accrual of that upon the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 invention of a test that would allow people to be  
2 screened safely for lung cancer, which they allege  
3 happened within three years of when they sued.

4 So they never made -- they certainly made the  
5 argument that -- that cigarette smoke is toxic but they  
6 never made the argument that the plaintiffs had suffered  
7 a present injury and that's clear in the -- in the  
8 decision at Page 446 of the decision. Right at the  
9 beginning, the Court says, plaintiffs do not claim to  
10 have suffered physical injury or damage to property and  
11 later on in that same page they say, having alleged no  
12 physical injury or damage to property in their complaint,  
13 plaintiffs' only potential pathway to relief is for this  
14 Court to recognize a new tort, namely, an equitable  
15 medical monitoring cause of action.

16 Therefore, the plaintiffs in Caronia did not,  
17 as defendants argue, present the argument we're  
18 presenting. They never alleged that these smokers had  
19 toxic invasion of the body and that being an injury.  
20 They only alleged that smoking caused them to suffer an  
21 increased risk and, therefore, they should have medical  
22 monitoring but they needed this new devised cause of  
23 action to get there because the statute of limitations  
24 issues were shot.

25 From our standpoint, Judge, nothing in the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 Caronia decision specifically overturned 80 years of  
2 precedence in New York. There's nothing -- there's not  
3 one quote from the Caronia decision that the defendants  
4 can point to that says that the Court explicitly said  
5 that that line of cases that we have -- we  
6 have reinforced time and time again for 80 years is no  
7 longer to be followed.

8 In fact, what the Caronia Court did say was  
9 that they cited to Schmidt and -- Schmidt and Askey and  
10 they cited to them favorably and said, in those cases,  
11 there was a physical injury. The Courts found physical  
12 injury. Even though it was a slight physical injury, it  
13 was a physical injury and that distinguished what was  
14 being argued in Caronia from those cases because, in  
15 Caronia, the plaintiffs explicitly said we're not  
16 claiming a present personal injury.

17 And in Askey's holding, what Askey said is the  
18 defendant is liable for reasonable, anticipated,  
19 consequential damages which may flow later from a toxic  
20 invasion although the invasion itself is an injury too  
21 slight to be noticed at the time of inflicted. The Court  
22 also brought out Abusio case. The Abusio case not  
23 only -- which was cited by the Court of Appeals and not  
24 only did the Court say the fear of cancer was an injury  
25 but also the accumulation of a toxic substance in the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 body was an injury and that was recited in the -- in the  
2 Allen case as well. That -- that accumulation of the  
3 toxic in the body was considered an injury and, of  
4 course, that -- that went in line with Schmidt and 80  
5 years of precedence to say that.

6 Now, the defendants tried to argue that, well,  
7 those cases, which they didn't mention on -- on oral  
8 argument, they say that they have statute of limitations  
9 cases because Judge Pigott in his majority decision said  
10 that was for accrual purposes.

11 Well, what does "accrual" mean? Accrual --  
12 according to the Court of Appeals in the Connecticut  
13 case, means that all of the elements of the cause of  
14 action necessary for relief in Court are present and  
15 accrual then requires injury to be present. So the  
16 Courts have held that -- in other words, it would be --  
17 it would be anomalous, in fact, it would be illogical to  
18 say that you have a cause of action accrues for purposes  
19 of statute of limitations purposes but then it should be  
20 dismissed immediately because there's no present injury.

21 Those two concepts cannot fit together. So,  
22 what the Court of Appeals has long held and not change,  
23 and Caronia doesn't change, is that invasion of the body  
24 by a toxic substance is an injury which was sufficient to  
25 support a cause of action and have that cause of action

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 accrue.

2           So Caronia doesn't overturn that line of cases  
3 and, again, one would think if a Court wanted to overturn  
4 80 years' worth of precedence that they spent their time  
5 to describe as a right line readily verifiable rule would  
6 do so explicitly and they didn't. They didn't mention it  
7 because that issue really wasn't presented to them in  
8 that case because the plaintiffs didn't want to present  
9 the issues of physical injury.

10           So the next argument that the defendants make  
11 in their brief is, well, the legislature passed 214(c) in  
12 1985 that changed the rule. They, again, don't mention  
13 that in their oral argument but that is not true, either,  
14 your Honor. I quote Judge Wesley, in the MRI Broadway  
15 case, where he says -- and this was in 1998 which was --  
16 this would be 13 years after the statute was passed -- he  
17 said for over 60 years this Court has held that a cause  
18 of action in toxic exposure cases accrues upon initial  
19 exposure to the toxic substance. While the legislature  
20 has chosen to temper the effects of this rule through the  
21 adoption of discovery inspection for certain toxic  
22 sources, the statute does not change this Court's basic  
23 definition of injury, which is at the time of the  
24 invasion of the body and the Germantown and the MRI case  
25 and the Jensen case also make clear that 214(c) was not a

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 statute that was passed to re-define injury in New York.  
2 It was a statute that was passed to toll the statute of  
3 limitations from the date of injury until the date of  
4 discovery of the injury and that is what that section  
5 did.

6 So 214(c) in no way -- according to Judge  
7 Wesley's own statement, in no way changed the rule that  
8 New York has followed for 80 years.

9 The defendants then fall to the policy  
10 arguments and try to say that the floodgates would open  
11 to allow people who have been exposed to toxic substances  
12 and accumulations in their bodies to recover in New York,  
13 and basically what they're saying is that the law of  
14 New York, 80 years has opened the floodgates because  
15 that's been the law in New York for 80 years.

16 But the premise behind the policy statements in  
17 Caronia was clear. At the outset, as I just read to the  
18 Court, the Court says the plaintiffs do not claim present  
19 physical injury. So the concept behind those statements  
20 by the Court with regard to policy were without a  
21 physical injury, we do not think it's appropriate to  
22 allow anyone to bring a cause of action. There has to be  
23 a physical injury or an injury to property.

24 But remember this too, your Honor. The  
25 defendants' argument appears to be, well, unless there is

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 physical illness, which, again, the Snyder case made  
2 clear the illness is a consequence of injury, it's not  
3 the injury. But unless there's physical illness, the  
4 Court of Appeals made clear they don't want asymptomatic  
5 plaintiffs to be able to recover medical monitoring  
6 damages. The Court of Appeals could have done that in  
7 Caronia. They chose not to.

8 The Court of Appeals made it very clear that  
9 consequential medical monitoring damages are recoverable  
10 by people who have damaged property.

11 People who have damaged property don't have  
12 physical personal injuries. They have an injury  
13 sufficient to bring a negligence claim and what the Court  
14 of Appeals said, as long as there's an injury sufficient  
15 to bring a negligence claim, consequential medical  
16 monitoring damages can be recovered.

17 Your Honor, the real policy issue here is the  
18 defendants' argument that the children of Hoosick Falls  
19 should not be covered by a medical monitoring class  
20 because that is exactly what they are. In other words,  
21 we can have -- some of the plaintiffs are here today that  
22 have property damage. They would be able to bring a  
23 cause of action. They would be able to recover medical  
24 monitoring damages. Those property owners whose property  
25 has been damaged but their children, who were exposed to

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 exactly the same water and in fact have a higher risk of  
2 illness because of their small body mass, would not be  
3 because they're not property owners and they don't have  
4 property damage. The Court of Appeals never intended  
5 that to be the outcome of this type of interpretation  
6 and Caronia didn't even address this particular scenario  
7 because Caronia plaintiffs admitted they didn't have a  
8 personal injury. They didn't have any present injury.

9 So, your Honor, our argument is basically that  
10 without those nine Court of Appeals cases clearly stating  
11 the rule being overturned, our allegations are not only  
12 sufficient to go forward in this case, they're actually,  
13 as a matter of law, proof that we have had sufficient  
14 injury and the cases that the -- that --

15 The final thing I'll mention, your Honor, is  
16 that there are several cases the defendants cite to,  
17 federal cases from other jurisdictions. Two of those  
18 cases interpret a federal statute, not New York law.  
19 They -- they -- the Price-Anderson Act, which was the  
20 exclusive nuclear accident legislation, has specific  
21 definitions in that Act. Those two cases only interpret  
22 that specific definition, has nothing to do with this  
23 case. The other two cases, Rhodes and most recent case  
24 from Alabama, both interpret laws from other states,  
25 and if you look at the -- at the West Morgan case, one

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1     they most recently cited --

2             THE COURT:   You don't have much time if we want  
3     to let our other --

4             MR. SCHWARZ:   Sorry, your Honor.

5             THE COURT:   I'm not -- I got just, I wanted to,  
6     instead of doing the reply right now, let me get to the  
7     other issues and then we will do replies at the end.

8             MS. BIRNBAUM:   Thank you, your Honor.

9             THE COURT:   Hopefully there will be.   Right now  
10    I guess it's Ms. Preheim?

11            MS. PREHEIM:   Yes.   Thank you, your Honor.   My  
12    name is Elissa Preheim, I'm on behalf of Honeywell.  
13    Plaintiffs' remaining claims at issue today are tort  
14    claims for property damages, which I will address.  
15    Plaintiffs' claims must be dismissed because plaintiffs  
16    lack standing to sue for contamination of groundwater  
17    which they do not own and they do not allege physical  
18    harm to their property, unnecessary predicate to recover  
19    in tort for economic harm.

20            Here, none of the named plaintiffs alleged any  
21    such physical harm.   Plaintiffs' claims are premised on  
22    alleged injury to groundwater but groundwater is a public  
23    resource held by the state, indeed the state is already  
24    addressing the groundwater in Hoosick Falls through  
25    remediation under enforceable consent decrees.

          Lisa L. Tennyson, CSR, RMR, FCRR  
          UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1           Plaintiffs do not contest that groundwater is  
2 not their property under New York law. Instead, their  
3 opposition brief now asserts a purported injury that is  
4 nowhere alleged in their complaint.

5           The brief asserts that plaintiffs sustained  
6 physical harm to their property -- properties because  
7 PFOA is in their soil but the complaint conspicuously  
8 does not allege that PFOA is in the soil of any of the 11  
9 plaintiffs' properties. Plaintiffs' brief also argues  
10 that they sustained physical harm to property because  
11 PFOA was inside their wells, pipes or taps at some point  
12 but the complaint does not allege that any physical  
13 damage or invasion to these items.

14           Finally, plaintiffs' claims do not sound  
15 private nuisance under New York law which limits private  
16 nuisance to something that impacts one or relatively few.  
17 So I want to start by discussing standing to sue for  
18 groundwater contamination.

19           THE COURT: Let me ask you one quick question.

20           MS. PREHEIM: Sure.

21           THE COURT: We view this as a negligence claim  
22 instead of a trespass claim. Isn't this just a question  
23 of the scope of the defendants' duty as was put in a case  
24 you cite a lot, which is 532 Madison Avenue? In other  
25 words, why isn't a home whose supply of water is

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 contaminated by pollution in groundwater within the  
2 zoning of danger if we take that approach?

3 MS. PREHEIM: Your Honor, because under  
4 New York law, both negligence and strict liability  
5 require a physical injury to plaintiffs' property.  
6 That's in the 55 Motor case; Rebecca Moss case that we  
7 cite, which affirms dismissal of the negligence claim and  
8 cites the 532 Madison. In other words, New York law  
9 imposes no duty to protect against purely economic  
10 losses, such as alleged diminution of the property value  
11 here.

12 In the 532 Madison case, the businesses located  
13 near a collapse, brought negligence claims for alleged  
14 loss of income due to the street closures, but the Court  
15 of Appeals of New York held that those negligence claims  
16 had to be dismissed because there was no accompanying  
17 allegation and physical injury. In fact, plaintiffs  
18 concede in their opposition brief that New York law  
19 prohibits recovery of purely economic losses where the  
20 plaintiffs have sustained neither personal injury or  
21 property damage; that is at Page 24 and 25.

22 Here, none of the plaintiffs allege any  
23 physical injury and, in fact, plaintiffs appear to  
24 recognize that the alleged groundwater contamination is  
25 not a physical injury to property that can support their

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 tort claims, including negligence.

2 Although their complaint refers to water more  
3 than 170 times, plaintiffs' opposition brief now argues  
4 that this case is really about soil contamination but the  
5 soil in the names plaintiffs' properties is not mentioned  
6 anywhere in the complaint.

7 The complaints only references to PFOA in the  
8 soil relates to the Hoosick Falls landfill and the  
9 McCaffrey Street facility. But even then, those  
10 allegations state PFOA can migrate from the soil to the  
11 groundwater. So, really, those allegations simply  
12 reinforce that plaintiffs' claims are about alleged  
13 groundwater contamination and, tellingly, while the  
14 complaint alleges whether PFOA was detected in municipal  
15 water supply or in private wells and at well levels, the  
16 complaint never alleges that PFOA was detected in a soil  
17 of any of the named plaintiffs' properties.

18 Now, plaintiffs' opposition brief also asserts  
19 that PFOA physically injured their properties through  
20 contamination of wells, private wells and traveled  
21 through their pipes and flowed out of their taps and  
22 showerheads but while the wells, pipes, taps and  
23 showerheads are alleged to be conduits for allegedly  
24 contaminated groundwater, the complaint does not allege  
25 that the PFOA caused any damage to any of these items.

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1           There are no allegations that the wells, pipes,  
2       taps were damaged by contact of PFOA. There are no  
3       allegations these items stopped functioning. That is  
4       fatal to their negligence claim but it also -- New York  
5       law rejects that notion that trespass claims can be --  
6       can be based on an invisible invasion without tangible  
7       damage.

8           THE COURT: Now, this same argument you apply  
9       to the wells that are owned -- private wells as opposed  
10      to the house?

11          MS. PREHEIM: Yes. For negligence, correct,  
12      for municipal and for private wells.

13          THE COURT: Okay.

14          MS. PREHEIM: The plaintiffs only assert  
15      trespass as to the private well owners. But as we cited  
16      in our brief and Celebrity Studios and the Ivory case,  
17      New York does not recognize trespass based on invisible  
18      invasion without tangible damage and, notably, under  
19      federal court case we apply this principle to reject  
20      nearly identical claims in another PFOA groundwater case  
21      and that was the West Morgan case describing our brief.

22          In addition, the Ivory case dismissed trespass  
23      claims based on alleged vapor invasion and air emissions  
24      which included were only tangible -- intangible, excuse  
25      me, your Honor.

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1           Again, here, too, plaintiffs don't allege that  
2 PFOA caused any physical or structural damage to their  
3 wells, pipes, taps or showerheads and because they failed  
4 to plead any physical injury to their property, they  
5 cannot state a claim under New York law for diminution of  
6 property values.

7           The widely accepted, if not universal, view  
8 under New York U.S. Court is causing the value of  
9 another's property to diminish is not, in and of itself,  
10 a basis for tort liability. Something more, such as  
11 physical injury, is required. Here, plaintiffs failed to  
12 allege that something more.

13           As I've discussed briefly previously and as in  
14 the Ivory case, groundwater doesn't belong to the owners  
15 of real property. Therefore, allegations of groundwater  
16 contamination do not plead injury to property.  
17 Consistent with this injury requirement under New York  
18 law, Courts applying the laws of other jurisdictions have  
19 dismissed negligence claims based on alleged groundwater  
20 contamination. For example, we cite in our briefs the  
21 Rhodes case where the plaintiffs alleged PFOA  
22 contamination in the public water supply but the Fourth  
23 Circuit held that such allegation of contamination alone  
24 does not constitute injury to support negligence claim.

25           The District of New Jersey reached the same

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 conclusion in the Player case, which was affirmed by the  
2 Third Circuit. There, residential property owners, MTBE  
3 contamination of their aquifer, the source of their  
4 drinking water, wells, but the Court there found  
5 negligence requires injury and a release of contamination  
6 into the groundwater aquifer does not itself establish  
7 injury.

8 So, plaintiffs cannot state a tort claim for  
9 property damages here because they alleged groundwater  
10 contamination is not a physical injury to plaintiffs'  
11 property and they have not alleged any other physical  
12 invasion or damage to their property.

13 I briefly want to turn to plaintiffs' private  
14 nuisance claims. A private nuisance under New York law  
15 is that which threatens one person or relatively few.  
16 Here, however, plaintiffs' claims are based on  
17 allegations there has been a widespread harm affecting  
18 the use of groundwater, a public resource. Plaintiffs  
19 preface their private nuisance claims on the allegation  
20 that defendants have contaminated the drinking water in  
21 Hoosick Falls and the surrounding area and that the  
22 impact of that contamination has had on the Hoosick Falls  
23 community.

24 These claims are inconsistent with the claim of  
25 private nuisance which the New York Courts of Appeals

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 have held impacts one person or relatively few. Because  
2 of that limitation, the Courts have held that where  
3 private plaintiffs bring a suit to remedy allegation of  
4 contamination of a drinking water supply, the claim is  
5 not one for private nuisance. The Southern District of  
6 New York dismissed private nuisance claim on alleged  
7 contamination of the Town of New Windsor water supply.  
8 It held that the options of large-scale impact of a  
9 contaminated water supply were not consistent with the  
10 sustainable --

11 THE COURT: Did you refer yet to the Baity case  
12 at all? Did that foreclose your private nuisance public  
13 distinction argument? That wouldn't apply to wells?  
14 Baity case, which denies summary judgment on the ground  
15 that the contamination of plaintiffs' private well, could  
16 constitute a special injury? Did you hold that or  
17 distinguish that?

18 MS. PREHEIM: I'm not sure the Baity case that  
19 you are referring to, your Honor, but here this -- the  
20 allegations here are the allegations of contamination to  
21 both the municipal supply and the private well which had  
22 large-scale -- as plaintiffs are alleging, have  
23 large-scale impact to the community at large.

24 THE COURT: Okay.

25 MS. PREHEIM: Likewise, the Alabama Federal

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 Court recently dismissed private nuisance claims brought  
2 by the property owners alleging PFOA contamination of the  
3 town drinking water supply and under Alabama law, like  
4 New York law, private nuisance is limited to its  
5 jurisdiction effect on one or few individuals.

6 So here, because named plaintiffs alleged  
7 contamination of town water supply and brought impact to  
8 the Hoosick Falls community, their claims do not sound  
9 improper nuisance.

10 So, in short, your Honor, based on the  
11 complaint as pleaded, plaintiffs do not state cognizable  
12 tort claims. They concede that they don't own the  
13 groundwater, which is a public resource held by the state  
14 and, indeed, the state is already working in cooperation  
15 with both defendants to investigate, remediate  
16 groundwater of Hoosick Falls.

17 The plaintiffs don't allege that they own the  
18 drinking water. They don't allege that they installed  
19 and paid for any treatment system. They don't allege any  
20 contamination of soil on their property. They don't  
21 allege that they are physically sick and, in fact,  
22 expressly claim that physical injury.

23 There are some things that plaintiffs can't  
24 allege. There are some things that plaintiffs perhaps  
25 have chosen not to allege. But on the complaint as

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1     pleaded, whether they can state a cognizable claim is,  
2     they have not done so in this complaint.

3             THE COURT: Very good. Thank you. I guess we  
4     are -- Ms. Greenwald.

5             MS. GREENWALD: Thank you, your Honor. Robin  
6     Greenwald for the plaintiffs. Your Honor, I'd like to  
7     spend a few minutes putting this case in context, what  
8     happened to the people of Hoosick Falls because I think  
9     it goes to the heart of our complaint, which is, that  
10    people's property was invaded by the PFOA that was  
11    discharged by the defendants, traveled through  
12    groundwater and then into the drinking water taps of our  
13    plaintiffs. That's what our complaint alleges in every  
14    single aspect.

15            So about a year ago the residents of Hoosick  
16    Falls learned the first time that their water they had  
17    been drinking in their homes for decades was contaminated  
18    by PFOA from the activities of their defendants.  
19    Although health official advisory for PFOA drinking water  
20    is currently 70 parts per trillion, people learned that  
21    the drinking water they had been drinking was this high  
22    as 600 parts per trillion and even higher.

23            EPA told residents on the municipal water to  
24    stop drinking the water in their homes and to stop  
25    cooking with the water in their homes. The residents on

          Lisa L. Tennyson, CSR, RMR, FCRR  
          UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 private wells were told by EPA not to use their water in  
2 their homes if the water tested at 100 parts per trillion  
3 or higher, and if their private well owners had yet had  
4 their water tested, EPA told them don't drink the water  
5 in your home. This is water that invaded their homes.

6 So the residents in Hoosick Falls had to stop  
7 using their water. Enduring the inconvenience of bottled  
8 water use in their homes for all uses and, more acutely,  
9 they have had to endure the uncertainty of whether they  
10 are still consuming PFOA in their drinking water, whether  
11 the properties that they own had any remaining value and  
12 whether they and their families suffered illnesses in the  
13 future as a result of having consumed PFOA in their  
14 drinking water in their homes for decades.

15 THE COURT: Defendants, in fact just now,  
16 stated it, seemed to allege that they don't disagree  
17 with, at this point, anything you're saying but they seem  
18 to say they're not liable because you -- you plaintiffs  
19 don't own the groundwater and there was no soil  
20 contamination. How would you get around that?

21 MS. GREENWALD: So, your Honor, we don't own  
22 the groundwater. That is correct. But once you extract  
23 the water, once one extracts the water from the aquifer  
24 for drinking water use, there is an ownership interest  
25 that attached to that and New York law has recognized

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 that in every single solitary case it has addressed.

2 And I'm actually -- so the defendants have  
3 really made a great effort to try to rewrite our  
4 complaint. But the only fair reading of our complaint,  
5 your Honor -- and I wanted to go through just through in  
6 summaries and because of time, the only fair reading of  
7 our complaint --

8 THE COURT: I'm going to read all the papers.

9 MS. GREENWALD: But I want to summarize so you  
10 don't have --

11 THE COURT: I want you to highlight.

12 MS. GREENWALD: Highlight some paragraphs for  
13 you.

14 THE COURT: Sure.

15 MS. GREENWALD: There was a physical, tangible  
16 invasion of PFOA and contaminated water into every  
17 plaintiff's home. Now, as to soil, the soil allegations,  
18 your Honor, is that in addition to the dumping the PFOA  
19 in floor drains and other landfills and whatever else  
20 that was discharged, the process of using PFOA causes  
21 vapors to go out of the stacks and when the vapors  
22 are contaminated with air, they turn into particulate  
23 matter and the wind carries those particulate matter  
24 throughout the community. That's what happens. But the  
25 particulate matter drops, and so that is alleged in our

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 complaint, in paragraph 41 and paragraph 70. We alleged  
2 that the particulate matter from these vapors are -- are  
3 discharged among the community.

4 So let me go through a little bit of summary  
5 for you, your Honor, about what we do allege in our  
6 complaint that shows that this case is about and only  
7 about people's contaminated drinking water in their home.

8 So, in Paragraphs 1 and 9, we allege that  
9 residents of Hoosick Falls had been drinking water --  
10 drinking in their homes water laced with PFOA for years.  
11 In Paragraph 10 through 20 we go through each and every  
12 one of our class representatives and we allege that for  
13 each and every class representative, that each person  
14 drank contaminated water from his or her tap in his or  
15 her home until learning the water was contaminated with  
16 PFOA, at which time they stopped at the direction of the  
17 EPA.

18 In Paragraph 97, 100 and 112 we alleged that  
19 EPA informed residents of Hoosick Falls not to drink  
20 their water and I just -- Paragraph 92, 100 and 112, EPA  
21 told people not to drink their water in their homes, and  
22 I just went through that so I won't go into any more  
23 details. Again, assuming they had contamination at a  
24 certain level.

25 In paragraph 117, we allege that due to the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 PFOA contamination in residents' homes, including our  
2 class representatives and class members, some of the  
3 Hoosick Falls residents bathed with sponges so as to  
4 avoid inadvertent ingesting water during their showers in  
5 their home and paragraph 40 and 71, as I just mentioned,  
6 that is where we have the allegations about the vapors  
7 that are coming from -- from this -- the manufacturing  
8 facilities.

9           So, your Honor, on -- the defense made a -- a  
10 lot of arguments about the fact that we don't allege any  
11 damage to the property but rusted pipes or whatever type  
12 of damage they're talking about. But even defendants in  
13 their brief, their opening brief on Page 33 and in their  
14 reply brief on Page -- I believe it's 5, I will correct  
15 that if I'm wrong -- they say that to show property  
16 damage, you have to show physical harm or an invasion  
17 and just gloss over invasion entirely.

18           There is nothing more relevant to an invasion  
19 than drinking water entering into your home, into your  
20 pipes and coming out of the taps that you drink to  
21 sustain your life.

22           So, to our knowledge, there is no New York case  
23 and New York Court that has ever found that a person  
24 cannot assert a property damage claim when the source of  
25 their contamination comes from groundwater that is relied

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 on for the plaintiffs' drinking water source.

2 Now, Your Honor asked earlier about Ivory.

3 Ivory was not a drinking water case. Ivory was  
4 contaminated groundwater but as Your Honor notes, it was  
5 not drinking water, that was not the source of the  
6 groundwater drinking water of the people in that case.  
7 They got their water from somewhere else. The Ivory  
8 case --

9 THE COURT: Have you got a case that supports  
10 your contention that if it's drinking water that's  
11 contaminated?

12 MS. GREENWALD: Absolutely, your Honor. We  
13 have a whole lot of -- on Page 14 of our brief I actually  
14 have written that out so that it will be a -- some  
15 assistance here. On Page 14 of our brief we cite a  
16 number of cases, on Page 19 and 20, on Pages 21 through  
17 23, and on Pages 25 through 26, and I can go through  
18 those cases, your Honor, but I don't think time permits.  
19 But we have so many cases and perhaps what's most  
20 relevant here is the MTBE case. Most recent -- it is not  
21 really more relevant than others, but that's the deal  
22 that went on for well over ten years in the Southern  
23 District of New York. Groundwater contamination  
24 throughout the country. Many, many states in the country  
25 and that allegation there was that there were underground

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 leakage storage tanks that leaked gasoline and other --  
2 including MTBE up into the soil, rain then took that  
3 contamination into the groundwater, groundwater moved and  
4 then either municipal water providers or people on  
5 private wells pulled that water up for drinking water.  
6 That's what they do, that's the only source of water we  
7 have.

8 About half the country relies on groundwater  
9 for its drinking water and in those cases, in every  
10 single solitary case, nobody raised lack of standing.  
11 Nobody raised that. It was assumed that when you pull  
12 the water out of an aquifer, that it's contaminated, that  
13 either illness or makes water unpotable, that -- that  
14 there is a property damage. Why? Because there's an  
15 invasion of your property with a chemical that is not  
16 yours. It's the property of somebody else that invades  
17 your property and, tellingly, in the reply brief there's  
18 a mention of Exxon Mobil having MTBE case.

19 We address or brought up in a subsequent  
20 answer, I think the eighth amended answer or something,  
21 that Exxon Mobil raised this for the first time. It may  
22 have -- I don't really know but it is notable that Exxon  
23 Mobil did go to trial against the City of New York, City  
24 of New York sued Exxon Mobil and that case did go to  
25 trial and that case went to the Second Circuit, and the

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 Second Circuit -- Exxon Mobil did raise standing but it  
2 did not raise this issue and so the standing argument  
3 there was whether there was injury because the level of  
4 contamination was below the maximum contamination level,  
5 MCL. It was not that you can't assert property damage  
6 even though the chemical invades your property because it  
7 originally was in the groundwater.

8 And, your Honor, let me just spend a moment on  
9 a nuisance. I know I probably used up more time than I  
10 should but really -- as to property, there really is no  
11 case that I'm aware of that would hold otherwise and I  
12 should also add that most of the cases, in fact, I think  
13 almost every case but one that has addressed this has  
14 addressed it either in summary judgment or after trial.  
15 It is not addressed on a motion to dismiss because it is  
16 just common sense that when a contaminate enters the  
17 pipes in your home for your drinking water, that is the  
18 quintessential invasion of property.

19 So as to nuisance, I'm just going to address  
20 one issue and that is that the defendants' argument sort  
21 of boils down to its core, is that if you have more than  
22 a few people, you can't have a private nuisance but  
23 that's not the law in New York. The law in New York is a  
24 private nuisance threatens individuals, not the state.  
25 These essential elements being interference with the use

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 of or enjoyment of land actually by an individual or  
2 persons whose right has been disturbed.

3 In fact, the Court of Appeals held that the  
4 number of people impacted is not relevant to a  
5 determination of public rights, private nuisance and that  
6 was also in People versus Cooper which was a Second  
7 Department case.

8 So, here, the argument is sort of perversant  
9 with, if you are going to pollute, pollute a lot of  
10 people. Make it a lot of people whose homes are invaded,  
11 who can't use or enjoy their property because then you  
12 can avoid private nuisance. If you just do a few, then  
13 you can avoid private nuisance. That is not the law in  
14 New York and there really is no case that holds that  
15 where the holding is -- is dictated by the number of  
16 people impacted it is referenced -- your Honor, I don't  
17 want to misstate anything. It's referenced in cases but  
18 it is not the genesis of the whole case.

19 So I wish, unless Your Honor has any questions,  
20 I think that probably used up too much time.

21 THE COURT: Well, you all did well. I know you  
22 have a lot more to say but, number one, I expect you all  
23 said it in your papers, and which were extensive and we  
24 are going to be going over that, my three clerks and  
25 myself. If you wanted a minute to respond, I know --

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 MS. BIRNBAUM: That's all I want, your Honor,  
2 is a minute.

3 THE COURT: We will give you a minute.

4 MS. BIRNBAUM: Thank you, your Honor. I would  
5 like to just respond to the argument that the Schmidt  
6 line of cases somehow -- that wasn't any way affected by  
7 the Court's decision in Caronia. First of all, I would  
8 like to start from the Caronia case. By the way, the  
9 plaintiffs in Caronia relied on Schmidt as an exposure  
10 case and that they argued the same thing as plaintiffs  
11 are arguing here and it's not that decided.

12 It was clearly decided by the Court in Caronia.  
13 It was argued and it was reviewed and it was decided, and  
14 if you look at page and -- the discussion on Schmidt in  
15 this whole line of cases that is -- the plaintiffs are  
16 relying on, Schmidt, is discussed on 447 and Page 448 of  
17 the Court's decision and I'd just like to point out, the  
18 Court makes it very clear -- Court of Appeals -- that  
19 neither Schmidt or Askey question this state's long-held  
20 physical harm requirement, rather, they really -- they  
21 merely accept for accrual purpose, for statute of  
22 limitations accrual purposes that the injury accrued at  
23 the time of exposure.

24 And then the Court explains that 214(c) has  
25 overruled those cases because it now says that statute of

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 limitations runs from the time you have an injury and,  
2 therefore, those cases are overruled and if there was any  
3 doubt that these accruals of statute of limitations cases  
4 are different than whether you meet a present injury.  
5 The New York case of Penny, Eastern District Court of  
6 Penny against United Fruit, which was cited, says that  
7 these two concepts, the concept of accrual and the  
8 concept of individual, are factually and legally  
9 distinct. They are factually a -- so that whole line of  
10 cases has no bearing on whether there is a physical  
11 injury.

12 So, we now get to what plaintiffs say. That in  
13 Caronia they never argue that they had a physical injury.  
14 Well, they understood, they argued pretty much exactly  
15 what the plaintiffs are arguing here. They argued it in  
16 their briefs, they argued it in oral argument. What did  
17 they say? I quote: Plaintiffs were not merely exposed  
18 to cigarette smoke. Uncontroverted that they also  
19 suffered by harm to the tissues and cells of their lungs.  
20 That's what they argued to the Court and the Court said  
21 that, in effect, is not a physical injury. It's  
22 exposure. It's increased risk. It is not a physical  
23 injury.

24 So, all of the things that have been argued  
25 here were argued extensively and rejected by the New York

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 State Court of Appeals.

2 THE COURT: I understand. I understand that  
3 you disagree and I'm not going to keep going back and  
4 forth. I give a chance to revise --

5 MS. BIRNBAUM: Thank you.

6 THE COURT: Same one minute that Ms. Birnbaum  
7 took.

8 MS. PREHEIM: Thank you, your Honor. I have  
9 two very quick points. First of all, counsel talked  
10 about invasion of the home but if you look at the Ivory  
11 case, it was a groundwater contamination case that also  
12 alleged invasion from vapor invasion and air emissions  
13 from a contaminated groundwater and the Third Department  
14 in Ivory dismissed the trespass claims based on those  
15 allegations because they found that vapor invasions and  
16 air emissions were only intangible invasion and they  
17 distinguished soil contamination.

18 And then finally, your Honor, with respect to  
19 the standing drinking water cases that Ms. Greenwald  
20 cited, we -- we went through those cases in our brief  
21 and as she acknowledged, none of them addressed the issue  
22 of whether the plaintiffs in those cases owned the  
23 groundwater or had a standing to sue and, in fact, she  
24 acknowledged here today standing was assumed there.

25 Ivory is directly on point, directly -- in 2014

Lisa L. Tennyson, CSR, RMR, FCRR  
UNITED STATES DISTRICT COURT - NDNY

BAKER, et al. v SAINT-GOBAIN - 16-cv-917

1 rejected tort claims based on alleged groundwater  
2 contamination because, and I'm quoting, groundwater does  
3 not belong to the owners of real property but is a  
4 natural resource entrusted in states by and for its  
5 citizens. So under New York law, the plaintiffs here do  
6 not have standing to assert groundwater contamination.  
7 Thank you, your Honor.

8 THE COURT: Thank you. Thank you, all. And I  
9 appreciate each of -- all of your arguments, and I'll  
10 consider everything and we will work on it and we will  
11 try to get a decision out expeditiously. I know it's  
12 important to all of you so we will take it that way.  
13 Thank you for coming up.

14 MR. SCHWARZ: Thank you.

15 MS. GREENWALD: Thank you, your Honor.

16 MS. BIRNBAUM: Thank you, your Honor.

17 (Whereupon, proceeding concluded)
